

IG LINTELS SETS THE STANDARD

IG Lintels' Brick Arch Sets are a new addition to the Creative Lintel Solutions range of 'brickwork support systems'. These pre-fabricated units provide developers and builders with a solution for saving valuable time, improving logistics and reducing materials wastage onsite.

Brick Arch Sets comprise a load bearing steel lintel with precision-cut brick-slips tapered onto the lintel. They are available in a variety of shapes, and they enable the builder to achieve even the most challenging of architectural designs.

Any structural opening 'archway' in a wall; from a parabolic arch, flat arch, segmental arch or gothic arch to a full arch with a clear opening and even a fully circular arch (bullseye) can be installed quickly and simply without the need of a specialist brickwork contractor and time-consuming hours onsite. Each brick arch set arrives as a single unit, with no individual components, making arches, openings and other architectural details a fast and efficient element of any build programme.

IG's impressive brick matching service means every Brick Arch Set is manufactured bespoke to order. This ensures that each individual unit is customised according to the individual size, shape and aesthetic requirements of the project.

With optional brickclad soffit, centrestone feature and insulation, the builder is able to specify each Brick Arch Set through their local builders' merchant and IG's free arch design service. This exemplary service enables the Brick Arch Sets to be available onsite in days, not weeks.

Providing whatever the specifier wants enables architects to leave their mark on a building or development. As such, the market for special and bespoke lintels and other brickwork support systems is growing rapidly. Derrick McFarland of IG Lintels, explains: "IG already deal with the majority of prestigious, large volume National Housebuilders in the industry. The advantage for these developers is the variety of lintels and brickwork support systems, like the new Brick Arch Sets, available to them. There is a call from the public, customers, and society in general, for quality and variety in the built environment.

“A builder can either buy pre-fabricated lintels and Brick Arch Sets from our Creative Lintel Solutions range, or spend more money on bricklayers to do the work on-site. Pre-formed, factory-finished steel lintels save time and money.”
